SUMMARY

Junior Software Engineer with experience as a Validation Engineer at Intel, where I automated AI workloads and supported regression/debugging across platforms. Previously worked as a Game Programmer at Vigilance Mobile, contributing to gameplay systems and collaborative project delivery. Skilled in Python and Batch from professional work, with additional C++ and C# experience through self-driven projects. Eager to apply strong coding, debugging, and teamwork skills to innovative engineering projects.

SKILLS

Technical Skills: C#, C++, Python, Batch

Software: Git Github, Unity, Unreal Engine, Intel GPA, PIX

Soft Skills: Agile, Scrum Kanban, Jira Confluence, Debugging

EXPERIENCE

UST Global (Contracted to Intel)

Validation Engineer

Folsom, CA
July 2021 - Present

- Contributed to the development and maintenance of automation scripts for AI testing across platforms, utilizing Python and batch scripting to facilitate efficient validation processes for advanced technologies such as OpenVINO, LLama, and MiniCPM.
- Devised and executed test cases for 3D/CAD software (Unreal Engine, Adobe, SPECview/APC, Xe suite).
- Collaborated with engineers to reproduce and debug driver issues, providing detailed reports that supported faster resolution.

Vigilance Mobile

Game Programmer

Nova Scotia - Remote
May 2021 - March 2022

- Collaborated with a small team of programmers and artists to design and deliver a complete mobile game project.
- Implemented core gameplay mechanics in C#, including movement, collectables, and power-ups.
- Managed source control and code reviews through GitHub, ensuring smooth team collaboration and project organization.
- Contributed to project documentation and planning, supporting consistent progress and alignment across the team.

PROJECTS

AI Position System Prototype - Unity

laurencesadler.com/projects/positioning-system-prototype/

- Developed a custom Environment Query System to manage AI entities Positioning Locations in Unity using C#

Ray Traced Image Renderer - C++

laurencesadler.com/projects/ray-tracer/

- Developed fundamental features for ray tracing image rendering in C++, including anti-aliasing, diffuse, metal, dielectrics materials, and reflection/refraction, using vector math.
- Implemented third-party libraries: OpenMP for multi-threading, TinyPNG for rendering PNG images, analyzing the library's source code, and making appropriate adjustments to the existing project.
- Implemented my own thread pool using C++ STL, increasing speed by ~60-70%.

Serious Business, Silly Deliveries - Unity

Global Game Jam 2024 • laurencesadler.com/projects/game-jams/

- Rapidly prototyped game mechanics and implemented gameplay interactions in C#.
- Collaborated with Systems Programmer and Game Designer to ensure timely delivery of project milestones.
- Implemented an effective source control management system to prevent merge conflicts and ensure smooth project workflow.

EDUCATION

Game Programming and Design Degree

Nova Scotia Community College

Truro, NS
2021
